

# Industry In The Development Areas: The Experience Of Firms Opening New Factories

**REPLAY PLASTICS**

**S**

- **Experiences:** Our execs have decades of experience with plastics, engineering, and successful startups.
- **Relationships:** The company has excellent relationships with firms that collect and distribute PET bottles.
- **Location:** There are no other PET recyclers in the Western U.S. area. Suppliers have expressed that they would rather work with a local recycler than continue to export to China.

**W**

- **High startup costs:** The very high costs of opening a PET plant will require investments and loans.
- **Construction time:** The recycling and extrusion facility must be built before we can begin processing plastic.

**O**

- **Major facility expansion:** The initial PET recycling facility will have a capacity of 46 million pounds, but the current annual stock of recyclable bottle material in CA, OR, and WA is more than 2000 lbs.
- **R&D:** Potential for other uses of PET recycling by-product.

**T**

- **Environmental protection standards:** Whenever the government regulations are updated, we need to develop technically and economically feasible recycling solutions that meet the standards.
- **Material scarcity:** Our business model is PET-dependent. If use of PET bottles declines or becomes obsolete, we will lose our supply.

Bplans

new schneider electric plant reflects firms global concept. What would you say about the development of the company's Vietnamese branch over the past 24 years? Schneider Electric has experienced a double-digit growth rate in square metres in size on 26, sq.m of land area, the new plant will be.
