Abstract: Synthesis and anticonvulsant potential of certain new 6-aryl-9-substituted-6,9-diazaspiro[4.5]decane-8,10-diones (**6a–f**) and 1-aryl-4-substituted-1,4-diazaspiro[5.5]undecane-3,5-diones (**6m–x**) are reported. The intermediates 1-[(aryl)(cyanomethyl)amino]cycloalkane-carboxamides (**3a–f**) were prepared via adopting Strecker synthesis on the proper cycloalkane followed by partial hydrolysis of the obtained nitrile functionality and subsequent *N*-cyanomethylation. Compounds **3a–f** were subjected to complete nitrile hydrolysis to give the respective carboxylic acid derivatives **4a–f** which were cyclized under mild conditions to give the spiro compounds **5a–f**. Ultimately, compounds **5a–f** were alkylated or aralkylated to give the target compounds **6a–i** and **6m–u**. On the other hand, compounds **6j–l** and **6v–x** were synthesized from the intermediates **5a–f** through
